

python-pillow/Pillow#6955

TITLE: Libtiff vulnerabilities (CVE-2022-2519, ..., CVE-2022-48281)

Some libtiff vulnerabilities in Pillow -- please confirm whether you are affected: [CVE-2022-2056 ... CVE-2022-48281]

[OS Information]

<Maintainer> Similar to #6577, these are related to tiffcrop, which we don't use: [CVE List]

<OP> Thank you for replying. The previous issue occurred in version 9.2.0. I'm not sure if it's still unaffected in version 9.3.0

<OP> Excuse me, are the remaining three vulnerabilities affected?
CVE-2022-2519, CVE-2022-2520, CVE-2022-48281

<Maintainer> Pillow is not affected:
Same for CVE-2022-2520, also tiffcrop.

Normalized Question

A scanner flags several libtiff CVEs against Pillow~\texttt{9.3.0} (Linux, Python~3.9). After the maintainer triaged the list, three remained in question: CVE-2022-2519, CVE-2022-2520, and CVE-2022-48281. Is Pillow 9.3.0 affected by these three libtiff vulnerabilities---CVE-2022-2519, CVE-2022-2520, and CVE-2022-48281?

Normalized Answer

No - Pillow is not affected by any of the three. They are vulnerabilities in libtiff's tiffcrop tool, which Pillow does not use
