

axios/axios#6969

Axios v1.10.0 appears to introduce a critical vulnerability via its transitive dependency on form-data@4.0.0. According to Snyk Security Advisory SNYK-JS-FORMDATA-10841150 ... How should I avoid exposure to the vulnerable form-data version when using axios@1.10.0?

Gold Answer

...Add an npm override to your package.json and regenerate package-lock.json:

```
"overrides": {  
  "form-data": "4.0.4"  
}
```

Rubrics for evaluation

Correctness: Recommends forcing the transitive form-data dependency to the fixed 4.0.4 version using an npm package.json override.

Completeness: Notes that the lockfile should be regenerated so the override actually changes the resolved installed dependency.
